

# Preliminary evaluation of peat CLSM in GEOS-ESM

CLSM configuration: LAND\_PARAMS: NRv7.2, Z0\_FORMULATION: 4

SPIN UP: Started on 19920101 using restarts from another global experiment, ran through 20200101 and discarded 1992-1999 as the spin up period

## Experiment Description:

Two 20-year (2000-2019) simulations on the 36km grid were used to analyze seasonal differences of LH, SH, and ZBAR

CTRL : Used NLv4 BCs

/discover/nobackup/smahanam/bcs/NLv4/SMAP\_EASEv2\_M36/

pCLSM: Used NLv4p BCS

/discover/nobackup/smahanam/bcs/NLv4p/SMAP\_EASEv2\_M36/

Both simulations used the same executable – i.e. peatCLSM code in this draft PR.

SMAP\_L4\_SM\_gph collection @ 3hr is available for soil moisture comparisons. However, the maps in subsequent slides show that peat modifications are outside of soil moisture validation sites.
